KAWEAH DELTA HEALTH CARE DISTRICT BOARD OF DIRECTORS QUALITY COUNCIL

Thursday, January 20, 2022 5105 W. Cypress Avenue Kaweah Health Lifestyle Fitness Center Conference Room

ATTENDING:

Board Members; David Francis – Committee Chair, Michael Olmos; Gary Herbst, CEO; Keri Noeske, RN, BSW, DNP, Vice President & CNO; Monica Manga, MD, Chief of Staff; Daniel Hightower, MD, Professional Staff Quality Committee Chair; Tom Gray, MD, Quality and Patient Safety Medical Director; Sandy Volchko DNP, RN CLSSBB, Director of Quality and Patient Safety; Ben Cripps, Vice President, Chief Compliance and Risk Management Officer; Evelyn McEntire, Director of Risk Management; and Michelle Adams, Recording.

OPEN MEETING – 7:00AM

- 1. Call to order David Francis, Committee Chair
- 2. Public / Medical Staff participation Members of the public may comment on agenda items before action is taken and after it is discussed by the Board. Each speaker will be allowed five minutes. Members of the public wishing to address the Board concerning items not on the agenda and within the jurisdiction of the Board are requested to identify themselves at this time. For those who are unable to attend the beginning of the Board meeting during the public participation segment but would like to address the Board, please contact the Board Clerk (Cindy Moccio 559-624-2330) or cmoccio@kaweahhealth.org to make arrangements to address the Board.
- 3. Approval of Quality Council Closed Meeting Agenda 7:01AM
 - Quality Assurance pursuant to Health and Safety Code 32155 and 1461 Daniel Hightower,
 MD, and Professional Staff Quality Committee Chair; James McNulty
 - Quality Assurance pursuant to Health and Safety Code 32155 and 1461 Evelyn McEntire, RN, BSN, Director of Risk Management and Ben Cripps, Vice President & Chief Compliance and Risk Officer.
- **4.** Adjourn Open Meeting David Francis, Committee Chair

CLOSED MEETING – 7:01AM

- 1. Call to order David Francis, Committee Chair & Board Member
- Quality Assurance pursuant to Health and Safety Code 32155 and 1461 Daniel Hightower, MD, and Professional Staff Quality Committee Chair

Thursday, January 20, 2022 - Quality Council

Page 1 of 2

- **3. Quality Assurance** pursuant to Health and Safety Code 32155 and 1461 Evelyn McEntire, RN, BSN, Director of Risk Management, and Ben Cripps, Vice President & Chief Compliance and Risk Officer.
- **4.** Adjourn Closed Meeting David Francis, Committee Chair

OPEN MEETING – 8:00AM

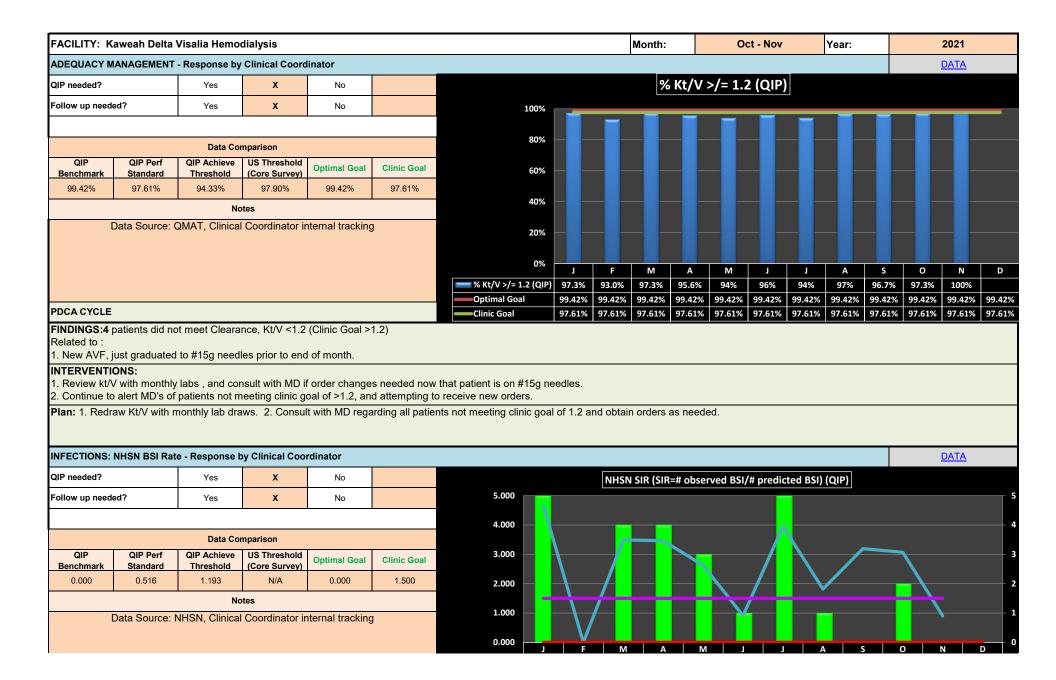

- 1. Call to order David Francis, Committee Chair
- 2. Public / Medical Staff participation Members of the public wishing to address the Committee concerning items not on the agenda and within the subject matter jurisdiction of the Committee may step forward and are requested to identify themselves at this time. Members of the public or the medical staff may comment on agenda items after the item has been discussed by the Committee but before a Committee recommendation is decided. In either case, each speaker will be allowed five minutes.
- **3. Written Quality Reports** A review of key quality metrics and actions associated with the following improvement initiatives:
 - 3.1. Renal Services Network 18 Quality Report
 - 3.2. Rapid Response Team (RRT) Quality Update
 - 3.3. Stroke Program Quality Report
 - 3.4. Sepsis Quality Focus Team (QFT) Update
 - 3.5. CAUTI Quality Focus Team (QFT) Update
- **4.** <u>Update: Clinical Quality Goals</u> A review of current performance and actions focused on the fiscal year 2022 clinical quality goals. *Sandy Volchko, RN, DNP, Director of Quality and Patient Safety*.
- 5. <u>Annual Review of Quality and Patient Safety Plans</u> A review of the AP.41 Quality Improvement Plan and AP.175 Patient Safety Plan including high risk, problem prone, high volume quality improvement initiatives for 2022. *Sandy Volchko, RN, DNP, Director of Quality and Patient Safety*
- **Rehabilitation Services Quality Report** Review of key quality indicators and associated action plans for improvement focused on the rehabilitation patient population. *Molly Niederreiter, Director of Rehabilitation Services & Elisa Venegas, Director of Nursing Rehabilitation and Skilled Nursing Services.*
- 7. Adjourn Open Meeting David Francis, Committee Chair

In compliance with the Americans with Disabilities Act, if you need special assistance to participate at this meeting, please contact the Board Clerk (559) 624-2330. Notification 48 hours prior to the meeting will enable the District to make reasonable arrangements to ensure accessibility to the Kaweah Delta Health Care District Board of Directors committee meeting.

PDCA CYCLE	Optimal Goal 1	10%	10%	10%	10%	10%	10%	10%	10%	10%	10%	10%	10%

**FINDINGS:** Currently not achieving goal of 10%. Noted slight decrease in long term catheters from previous month. The goal is to keep this trend moving forward. There were 5 TDC removals in the month of August. There are currently 3 pt's scheduled for TDC removal next month so far. There are currently 4 patients that are being cannulated that still need to be scheduled for TDC removal. We anticipate another decrease in long term catheter in the upcoming months.

INTERVENTIONS: CRAC continues to work effortlessly in monitoring maturing accesses and assessing when it is appropriate for TDC to be removed. CRAC also continue to collaborate with PD departement in regards to PD referrals and follow up.

PLAN: CRAC is actively strategizing, planning/implementing interventions with IDT for TDC rate reduction. For new patients, the referral will be sent on the day of their first HD treatment. Within one week of admission to the clinic, the CRAC will meet with the pt to provide education on either new access/or preserving existing permanent access. If the pt has a TDC, he/she should be educated in the process of access placement and risks of catheter. If the pt has AVF/AVG, the pt should be educated in preservation of access (washing access prior to tx, quarterly follow up appointments and recognizing abnormalities). Within one week of sending referral, CRAC will follow up to obtain an appt. Upon obtaining evaluation appt, CRAC will work with AA to solidify transportation for said appt. CRAC will work with AA to conduct reminder calls to the pt and confirmation of transportation the day before appt. Reminder note will be provided to the patient at HD treatment prior to appt as well. The same process will be for all vascular access appointments. Once the pt has had vascular access placement, all orders are entered by CRAC and an email is sent to the RN team, inclusive of RN, TL, RCC, and Manager. Upon removal of tunneled catheter, schedule a celebration on first day back at clinic.

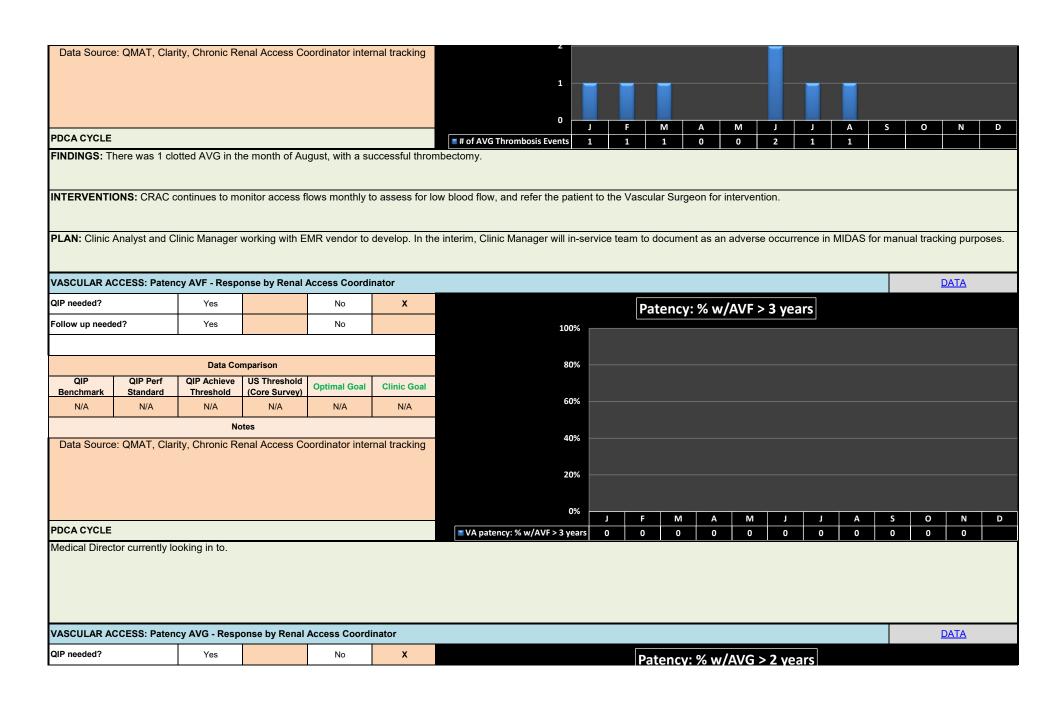

FINDINGS: This is the catheter rate for ALL patients including transient patients and AKI patients. There two patients admitted with a TDC in the month of August.

INTERVENTIONS: CRAC continues to follow up with AVF and PD referrals on a consistent basis. PD referrals may take longer at times with education being provided first, then referral to the surgeon, surgery to have PD catheter placed, training for a couple of weeks, then waiting for pt to be established at home with PD prior to TDC being removed.

PLAN: CRAC is actively strategizing, planning/implementing interventions with IDT for TDC rate reduction. For new patients, the referral will be sent on the day of their first HD treatment. Within one week of admission to the clinic, the CRAC will meet with the nt to provide education on new permanent access. If the nt has a TDC, he/she should be educated in the process of access placement and risks of catheter

Within one week of sending referral, CRAC will follow up to obtain an appt. Once the pt has had vascular access placement, all orders are entered by CRAC and an email is sent to the RN team, inclusive of RN, TL, RCC, and Manager. Upon removal of tunneled catheter, schedule a celebration on first day back at clinic. CRAC to follow up with Nephrologist on AKI pt's 3 months after admission to determine pt's status. If pt is deemed ESRD, CRAC to follow same procedure as mentioned above to obtain permanent access for pt. CRAC to monitor TDC status of transient pt's for duration they are dialyzing in the clinic. VASCULAR ACCESS: Thrombosis AVF - Response by Renal Access Coordinator DATA QIP needed? Yes # of AVF Thrombosis Events Follow up needed? Column1	Column2
	The Standardized Infection Ratio (SIR) of Bloodstream Infections (BSI) will be calculated among patients receiving hemodialysis (HD) at
BSI	outpatient HD centers.
	Patient Experience of Care: In-Center Hemodialysis Consumer Assessment of Healthcare Providers and Systems. Percentage of patient responses to multiple survey measures to assess their dialysis providers, the quality of dialysis care they receive, and information sharing about their disease. (Survey is administered twice a year).
ICH CAHPS	
Standardized Readmission Ratio (SRR)	Ratio of the number of observed unplanned 30-day hospital readmissions to the number of expected unplanned 30-day hospital readmissions
Standardized Transfusion Ratio (STrR)	Dialysis facility reporting of data on Medicare claims and in EQRS1 that are used to determine the number of eligible patient years at risk for calculating the risk adjusted facility level transfusion ratio (STrR) for adult Medicare dialysis patients.
Standardized Hospitalization Ratio	
(SHR)	Risk-adjusted standardized hospitalization ratio of the number of observed hospitalizations to the number of expected hospitalizations.
Kt/V Dialysis Adequacy	Percentage of all patient-months for patients whose delivered dose of dialysis (either hemodialysis [HD] or peritoneal dialysis) met the specified threshold during the reporting period.
Hemodialysis Vascular Access: Standardized Fistula Rate (SFR)	Adjusted percentage of adult hemodialysis (HD) patient-months using an autogenous arteriovenous fistula (AVF) as the sole means of vascular access.
Hemodialysis Vascular Access: Long-	
term Catheter Rate	Percentage of adult hemodialysis (HD) patient-months using a catheter continuously for three months or longer for vascular access.
Hypercalcemia	Proportion of all adult patient-months with 3-month rolling average of total uncorrected serum or plasma calcium greater than 10.2 mg/dL or missing.
Ultrafiltration Rate	Percentage of patient-months for which a facility reports all required data elements for ultrafiltration rate (UFR) in EQRS1 for all hemodialysis (HD) sessions during the week of the monthly Kt/V draw submitted for that clinical month for each eligible patient.
Medication Reconciliation (MedRec)	The percentage of patient-months for which medication reconciliation was performed and documented by an eligible professional
Clinical Depression Screening and Follow-Up	The percentage of eligible patients for which a facility reports in EQRS1 one of four conditions related to clinical depression screening and follow-up before the close of the December 2021 clinical month in EQRS.
NHSN Dialysis Event Reporting	i di
Measure	Number of months for which facility reports National Healthcare Safety Network (NHSN) Dialysis Event data to the CDC's NHSN system.

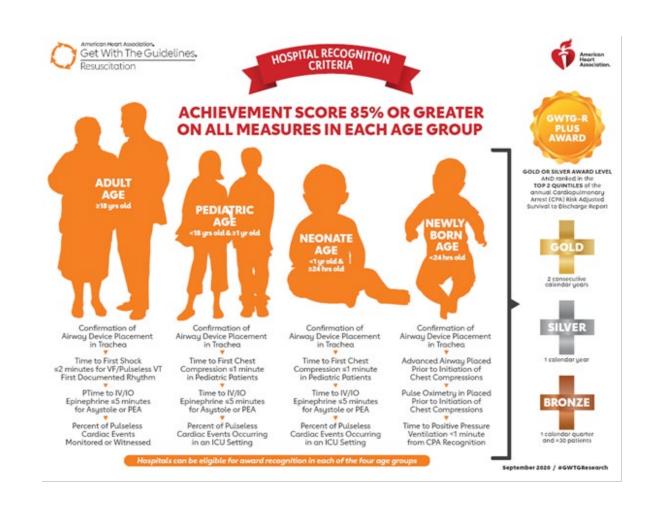

## **GWTG Resuscitation Criteria**

- The RRT/Code Blue Committee has joined Get with the Guidelines (GWTG) Resuscitation, AHA's National Registry, to have access to national and state benchmarks for code blue and RRT measures.
- This information has been used to create a new RRT and Resuscitation Scorecard.
- The RRT/Code Blue Committee will also begin measuring GWTG hospital recognition criteria benchmarks as well. These will improve the quality of our codes and qualify us for awards.
  - 1. Confirmation of airway device placement
  - 2. Time to first shock
  - 3. Time to IV epinephrine
  - Percent of Pulseless Events monitored or witnessed

## GWTG Recognition Measures-IMPROVEMENTS!

Despite the current climate in our hospital, the Rapid Response Team demonstrated improvements (albeit slight) in three of the 4 GWTG Recognition Measures: **Time to First Shock**, **Time to First IV/IO Epinephrine**, and **Percent of witnessed pulseless cardiac events**.

## Code Blues and RRTs Q3-2021

## Code Blue Summary

- The goal of the Rapid Response Team is to respond to the early recognition of patient deterioration through the use of the 7 Signs of Vitality (SOV) for activation of a Rapid Response. Additionally, early identification helps aide in the reduction of events that convert from a rapid response to a cardiac arrest and it helps hospital staff appropriately place patients to try and reduce the number of cardiac arrests/code blues that occur outside of the ICU. The hospital is currently inundated with patients who are acutely and very critically ill. Our current census has required us to overflow ICU patients to our intermediate critical cares (3W and 5T) and code blues in these areas are not considered to be within critical care, even though our ICCUs have many of the same resources as our ICUs. As such, the number of code blues occurring outside of critical care is very high despite our best efforts to funnel the sickest patients into one of our 41 ICU beds.
- Code blue survival to discharge benchmark had started to show signs of improvement at the end of Q2 but with the resurgence of COVID in our hospital, the code blue survival to discharge plummeted to 0% for the month of August- bringing our yearly mean down to 18% (5% below the California benchmark).
- There were slight improvements in 3 of the 4 GWTG Measures
  - Time to first shock (improvement by 3%, still measuring below goal of 85%)
  - Time to first epi (increased by 1% and currently performing well above goal of 85%)
  - Percent of witnessed arrests (increased by 1% and currently performing above goal of 85%)
- Rapid Response Team Summary
  - Highest amount of RRTs per 1000 patient discharge days: 145 in September (a new high for this year- the previous high was in January-131)
  - Highest mortality percentage: 33% in September → Previously, January had the highest mortality (40%). Since September had more rapid response events and resulted in less deaths, it means we are catching patients sooner and intervening to help prevent further deterioration and even death! This is great news!
- Average 2021 RRTs within 24 hours of Admit from ED are down 2% from last quarter (25% down to 23%). While still over the state average by 5%, the decrease in RRTs within 24 hours from ED Is great news!

# Code Blues and RRTs 2021

## Analysis

- Observed a direct correlation in number of COVID patients and increased volume of code blues, RRTs, and mortality
  which directly affected our code blue to survival to discharge metrics.
- In spite of the COVID census at KH, we have improved compliance with 3 of the 4 GWTG Measures!
- The overall volume and acuity of calls are increased but the RRT statistics show that we are catching patients earlier and intervening to prevent further deterioration in our patients- GREAT NEWS!

# Next Steps

- Recruit and fill Medical Director Position- Dr. Tang leaving end of December. In-progress
- Revise code blue form to easily capture all code blue process elements to meet GWTG standards. Point person-Abel. In-progress
- Review of Redivus Code Blue App for Consistent Documentation and Data collection. Point person- Evan. In-progress
- Teach nursing staff to use AED "Analyze" function in code blues. Point persons- Rosalinda and Shannon. In-progress
- Formalization of non-licensed staff and family activated RRT process. **Pending**
- Re-instate Hi-Fidelity mock in-situ code blues. Point Person- Shannon. Pending
- Formalization of role definition of each team member of the Code team using the developed assignment sheet. Complete
- Quality RN and Resident Physician to review all 130 RRTs that were activated within 24-hours of admit from ED to observe for trends and then QFT team to determine action plan. **Unable to complete-no resident available.**

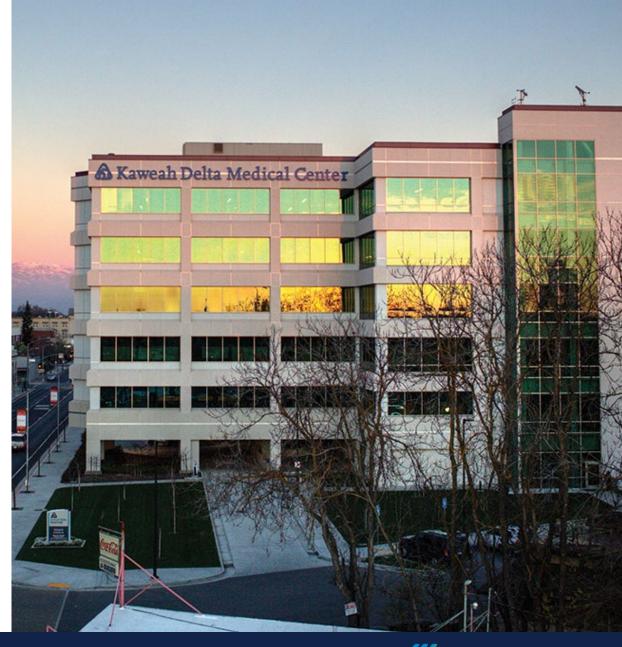

# Next Steps: Education

- Resume using Sim Lab/Sim Man for In-Situ Mock Codes-Shannon working w/ Dr. Sokol.
- RRT nurse will be working to form partnerships with specific units to "champion" and be a go-to person to help with education and reinforce utilizing RRT.
- Looking to start a project to teach staff to utilize
   AED function on ZOLLS while awaiting code team will decrease time to first shock per GWTG criteria Shannon and Rosalinda working with Clin Ed team.
- TCAR (Trauma Care After Resuscitation) and CALS (Cardiovascular Advanced Life Support) are now actively being taught to some of our team members. All staff who care for these special populations of patients will be receiving this specialty training in the next 4-6 months.

# Questions?

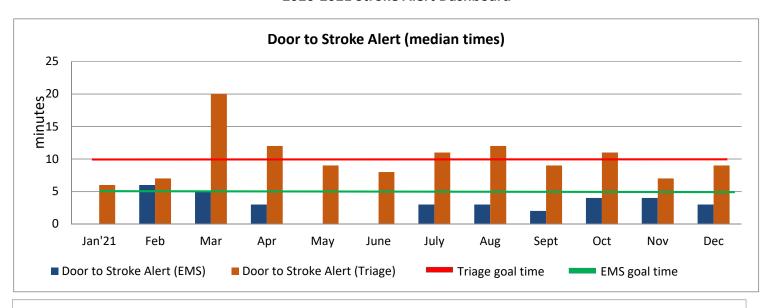

# Live with passion.

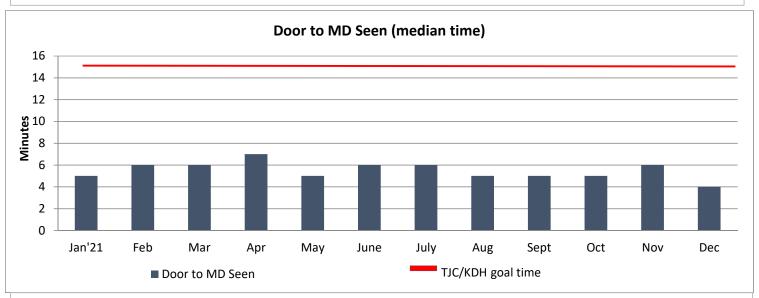

Health is our passion. Excellence is our focus. Compassion is our promise.

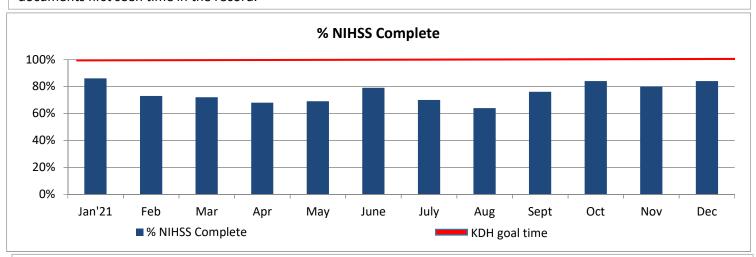

#### 2020-2021 Stroke Alert Dashboard

Per KDH ED Stroke Alert process; stroke alerts to be called within 5 min for EMS and 10 min for Triage. ED Stroke Alert Triage task force convened to look for opportunities for improvement March 2020.

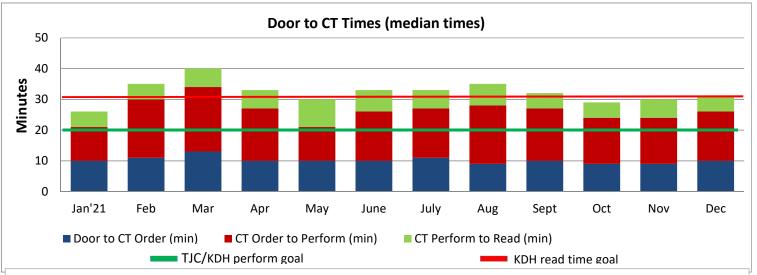

The expectation is that the physician will see the stroke alert patient within 15 minutes of arrival. Improvements made throughout the past year include: early notification from EMS, MD meets the pt at the door upon arrival, scribe documents first seen time in the record.

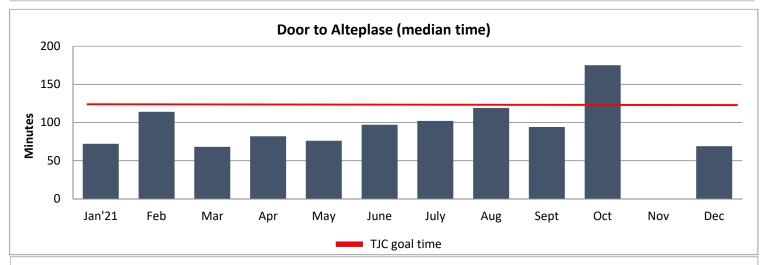

The expectation is that all stroke alert patients will have a NIHSS completed by a certified ED staff member and/or the attending physician; the primary responsible person is the attending/resident physician. This audit ONLY tracks if attending/resident physician have completed a full NIHSS in the ED record.

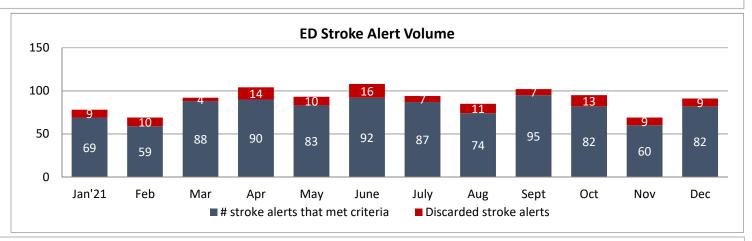

### 2020-2021 Stroke Alert Dashboard

CMS and TJC expectation is that the CT will be performed by 20 minutes and read by 45 minutes of arrival. KDH's CT read time goal is 30 minutes. Starting 2019; tracking of CT start times will be included in this measurement. start time is define by the first CT images in Synapse. **Feb 2021 removed CT start time metric.

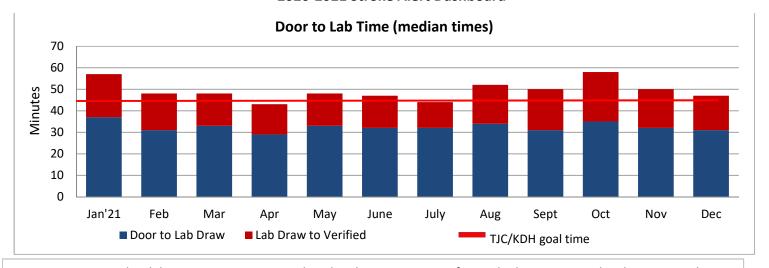

The data in this graph includes all Alteplase patients which differs from the TJC rate because exclusion criteria is not used. TJC expectation is that IV thrombolytics are given within 60 minutes to eligible patients who present for stroke care. AHA/ASA GWTG expectations were update in 2019 with new IV thrombolytic goal time to 45 minutes at least 75% of the time (when applicable). To meet this goal, continued changes to the stroke alert process have been made.

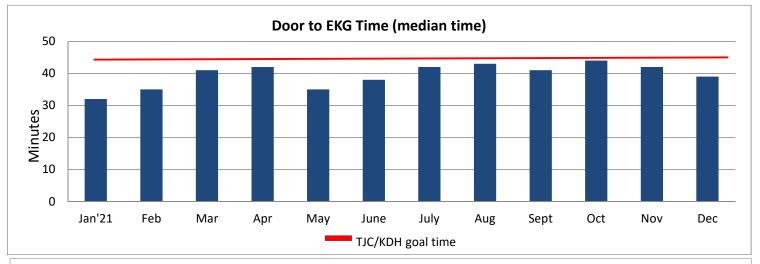

Stroke alert criteria includes: pt presenting with stroke like symptoms +FAST screen, stroke alerts called prior to arrival and up to 1 hour after arrival. Excluded cases: >1 after arrival or if stroke alert was cancelled.

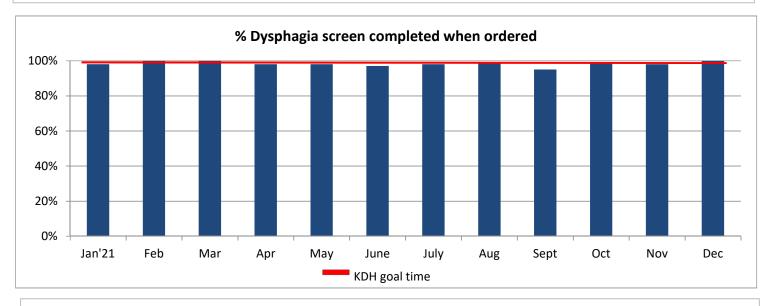

### 2020-2021 Stroke Alert Dashboard

TJC expectation is that laboratory tests are completed within 45 minutes of arrival. Changes in stroke alert process has been made early 2019 to improve lab verified times. Action items taken: IV start kits in CT rooms with lab tubes, lab label makers in both CT rooms and specimens taken immediately down to lab.

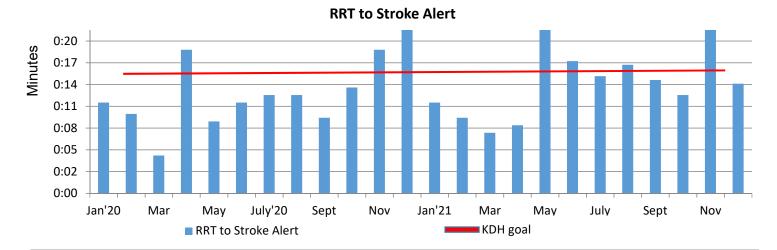

TJC expectation is that EKGs are completed within 45 minutes of arrival.

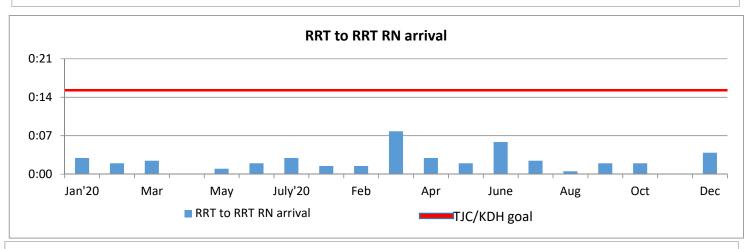

Dysphagia screening should be completed by the RN on all stroke alert patients prior to any pointake, including meds. Dysphagia screening is part of the ED stroke alert order sets. Goal is 100% compliance.

2020-2021

■MB							1					

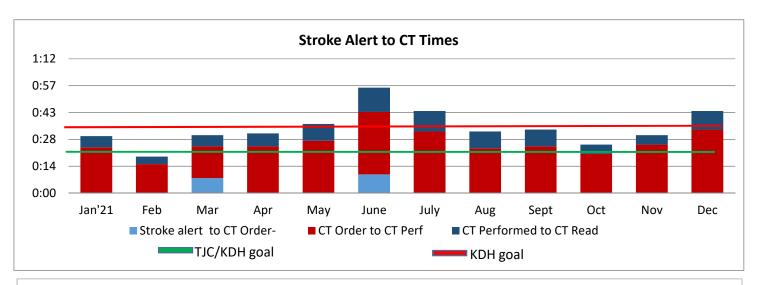

If patients exhibit any new or worsening neuro deficits while in the hospital; RNs are to call an RRT. The RRT RN will evaluate and determine if a stroke alert should be called. The goal from calling RRT to stroke alerts should be <15 minutes.

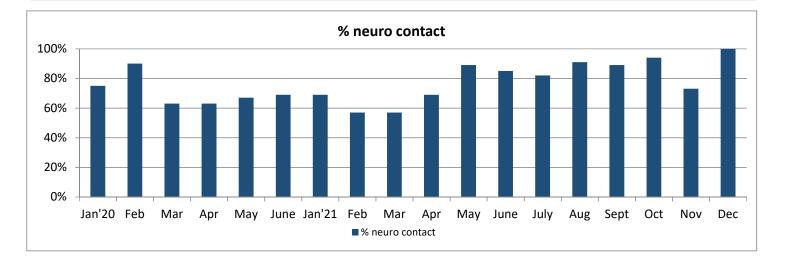

TJC expectation is that a designated provider is at the bedside within 15 minutes of stroke alert. KDH has designated the RRT RN as the provider for in-house stroke alerts.

79/145

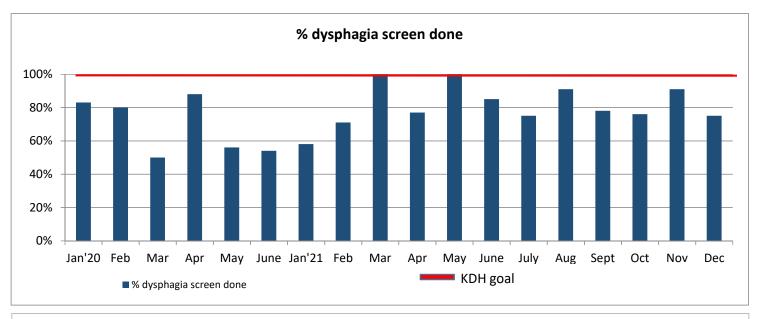

2020-2021
In-House Stroke Alert Dashboard

TJC expectation is that the CT will be read within 45 minutes of arrival. KDH's goal is 30 minutes (red line). TJC added a new metric in 2018; the expectation is that the CT will be performed within 20 minutes of alert (green line).

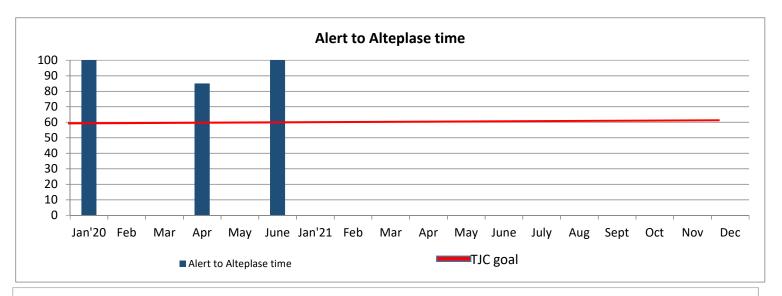

Neurology consultation should occur on all in-house stroke alerts.

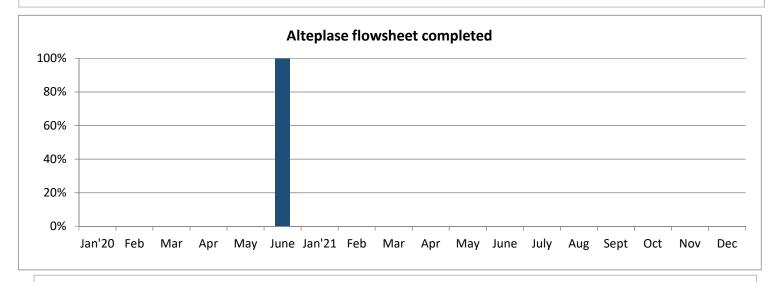

Whenever there are new or worsening neurological deficits  $\geq$ 3 points, the RN should perform a dysphagia screen to evaluate the patient's ability to swallow. 80/145

## 2020-2021 In-House Stroke Alert Dashboard

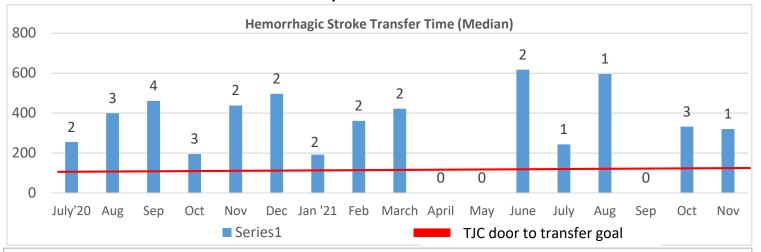

ED Patients: TJC expectation is that IV thrombolytics are given within 60 minutes to eligible patients who present for stroke care at least 50% of the time. In-House Stroke alerts: KDH expectation is that IV thrombolytics are given within 60 minutes to eligible patients who have been identified with new or worsening stroke symptoms

## 2020-2021 TRANSFERS FROM ED TO ANOTHER ACUTE CARE FACILITY Median Time by Minutes - Goal 120 Minutes

Hemorrhagic patients are transferred out for other procedures not done at KDH, specifically coiling/clipping of aneurysms or bleeds. A task force has been set up to help streamline the process, all action items are captured in PDSA document. The Covid 19 pandemic has caused delays in transfer times due to the additional precautions, resources and screening needed.

Transfers for ischemic strokes occur primarily if a large vessel occlusion is noted and would be eligible for endovascular treatment. As a result of the efforts made by the ED Stroke Alert Committee and the Transfer Process Task Force door to transfer times have improved; however the Covid 19 pandemic has caused delays in transfer times due to the additional precautions, resources, and screening needed in the recent months.

This cohort of patients have a large vessel occlusion that would be eligible for endovascular treatment and do not meet criteria for Alteplase administration. The Covid 19 pandemic has caused delays in transfer times due to the additional precautions, resources and screening needed in the recent months.

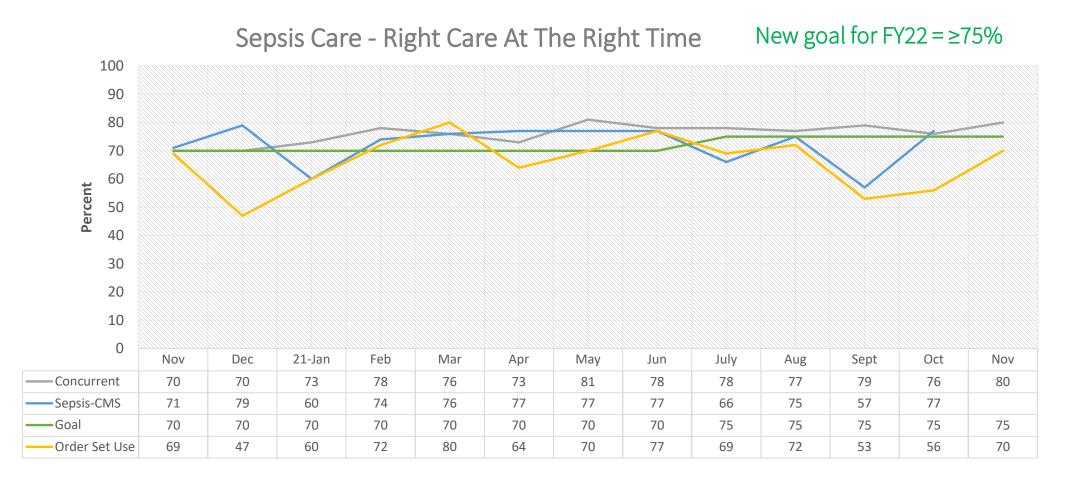

## SEP-1 Early Management Bundle Compliance

CA State Compliance 64% ~ National Compliance 60% ~ Top Performing Hospitals 82%

Percent of patients with sepsis that received "perfect care." Perfect care is the right treatment at the right time.

# Key Strategies

Sepsis - SEP-1 is an "all or nothing" measure

Required Action	Severe	Sepsis	Septic Shock								
Required Action	3-Hr Bundle	6-Hr Bundle	3-Hr Bundle	6-Hr Bundle							
Initial Lactate Collection	Yes										
Blood Culture Collection	Yes	Must be completed within 3-hrs of									
Initial Antibiotic Started	Yes	Severe Sepsis Presentation									
Repeat Lactate Collection (if Initial Lactate is > 2)	N/A	Yes		within 6-hrs of sis presentation							
30 mL/kg Crystalloid Fluids Started	N/A	N/A	Yes	Completed within 3-hrs of initial hypotension and/or septic shock							
Vasopressor Given (if hypotension persists)	N/A	N/A	Completed	Yes							
Repeat Volume Status Assessment	N/A	N/A	within 6-hrs of septic shock	Yes							

July	2021
------	------

Overall Sep-1 Compliance: 66%

21/32 (10/11 fallouts occurred during Sepsis Coordinator off hours)

- Initial LA: 92%
- Abx: 88%
- BC: 93%
- Fluids: 96%
- Repeat LA: 93%
- Vasopressors: 100%
- Reassessment: 89%

## August 2021

Overall Sep-1 Compliance: **75%** 

24/32 (**7/8** fallouts occurred during Sepsis Coordinator off hours)

- Initial LA: 97%
- Abx: 94%
- BC: 97%
- Fluids: 96%
- Repeat LA: 87%
- Vasopressors: 100%
- Reassessment: 100%

### September 2021

Overall Sep-1 Compliance: **57%** 

17/30 (12/13 fallouts occurred during Sepsis Coordinator off hours)

- Initial LA: 95%
- Abx: 80%
- BC: 88%
- Fluids: 94%
- Repeat LA: 86%
- Vasopressors: 100%
- Reassessment: 100%

### October 2021

Overall Sep-1 Compliance: 77%

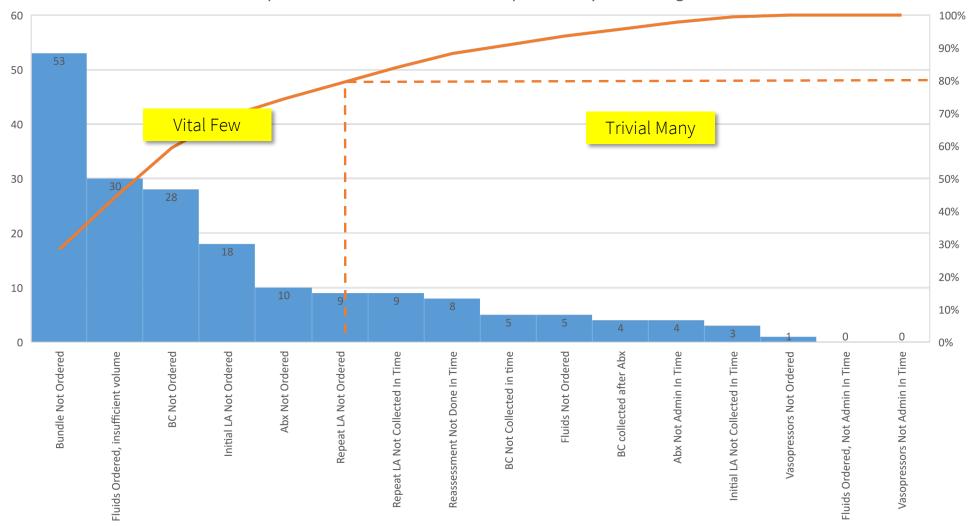

30/39 (**6/8** fallouts occurred during Sepsis Coordinator off hours)

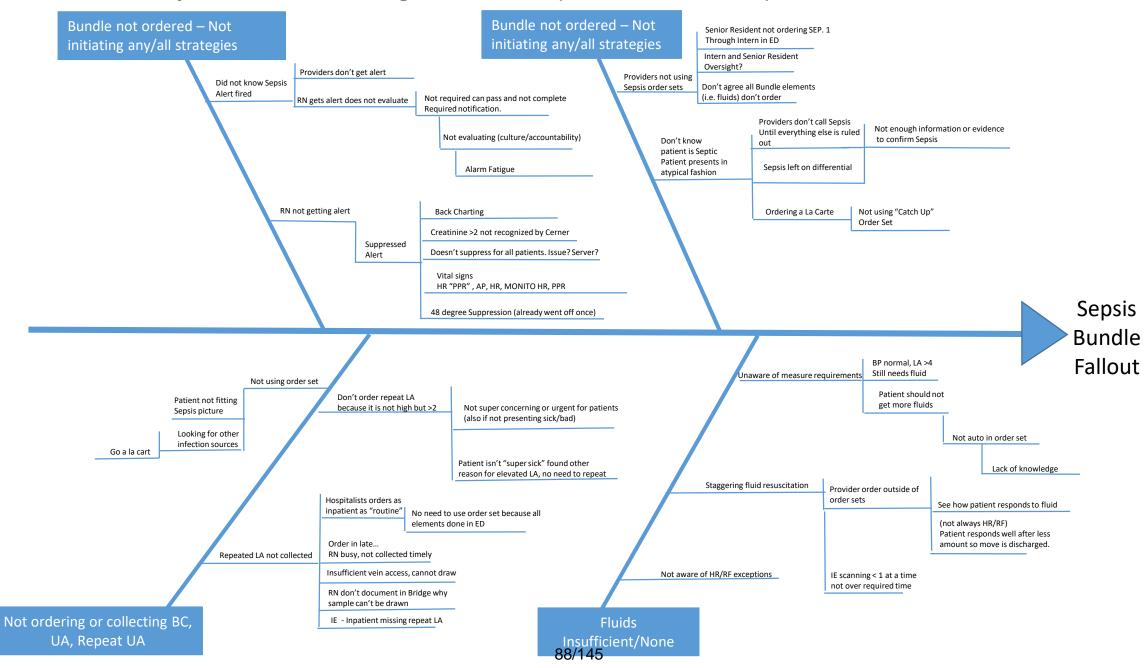

- Initial LA: 97%
- Abx: 92%
- BC: 97%
- Fluids: 97%
- Repeat LA: 90%
- Vasopressors: 100%
- Reassessment: 100%
- 88% (35/40) of SEP-1 fallouts occur when Sepsis Coordinators not here Action: Sepsis required physician notification of sepsis alert results in timely best practice intervention, "the bundle" COMPLETE, GO LIVE 6/29/21!
- Increasing CMS sampling during COIVD to generate a more statistically significant denominator
- Re-identifying root causes of SEP-1 bundle non-compliance to revise prioritized QI strategy list with stakeholders. Completion goal 12/31/21 COMPLETE
- 3 Current QI Strategies (additional actions pending root cause analysis):
  - 1. Provider notification process barriers and QI work
  - 2. Sepsis Simulation training (EM GME)
  - 3. Alert optimization

# Pareto Diagram

Sepsis Reasons for SEP-1 Non-Compliance July 2020 - Aug 2021

# DRAFT Root Causes & Improvement Strategies

Root Cause of SEP-1 Bundle Not Fully Implemented	Data	Potential/Actual QI Strategy Action					
<ul> <li>Do not know patient is septic because the alert did not fire</li> <li>Alert suppressed for 48 hrs after initial alert</li> <li>Creatinine &gt;2 not recognized by Cerner/in the alert algorithm</li> <li>Alert does not fire when a string of VS are documented all at one, it suppresses an abnormal VS(s) that require patient evaluation</li> <li>Alert does not fire when multiple VS (ie.HR, PPR, AP, etc) and one value is abnormal and the others are not</li> <li>Alert does not fire for providers (fires inappropriately such as when ED providers reestablishes a relationship with an inpatient to back document, or fires for triage provider after patient is in "back")</li> </ul>	SEPSIS ALERT EVALUATION Inpatient & ED Patients  •Patients with a Sepsis alert are 0.26 times (26%) more likely to have sepsis than not (424/1619 = 0.26)  • The odds a patient with no sepsis alert is septic is 0.01 (1%) (319/31,021)  Sensitivity – 0.57; Specificity – 0.95 Inpatient ONLY  • Patients with a Sepsis alert are 0.28 times (28%) more likely to have sepsis than not (417/1470 = 0.28)  • The odds a patient with no sepsis alert is septic is 0.03 (3%) (295/9,127)  Sensitivity – 0.59; Specificity – 0.83	<ul> <li>Improve sensitivity and specificity of alert         <ul> <li>Work with Cerner to evaluate criteria in "the cloud" can alert fire when Cr &lt;2.0</li> <li>30 hour alert "look back" on VS and labs</li> </ul> </li> <li>Suppress alert in ICU based on ICD10 sepsis dx</li> <li>Alert suppression (for RNs) changed from 48 hrs to 13 hrs (per shift)</li> <li>Optimize alert and turn on for providers         <ul> <li>Alert cannot fire when provider is no longer caring for patient (ie. alert fires for ED provider when documenting and patient has been admitted, or triage provider when pt is in "back" under care of another ED provider)</li> </ul> </li> </ul>					
Do not know the patient is septic because the RN did not evaluate the alert and execute provider notification process  • Alert fatigue, accountability	See provider notification data analysis slides	<ul> <li>See above for alert fatigue</li> <li>This is not appear to be a knowledge deficit "6 Attributes         Test" completed indicating that 4/4 RNs surveyed in         different units were able to articulate the who, what, where,         when, why and how of the provider notification process</li> </ul>					
Provider not using order sets for known septic patients where bundle elements are easily accessed  Resident & provider knowledge  Personal preference to go a la cart	12/21 (57%) ED SEP-1 fallouts did not use order set (July – Sept 2021)	ED simulation training FM simulation training?					
Patients sepsis not recognized because they present in atypical fashion  Order bundle elements a la cart as work up is completed  Sepsis left on the differential (not using dot phrase)  More than medicine. Life.	n/a	Education on dot phrase					

# DRAFT Root Causes & Improvement Strategies

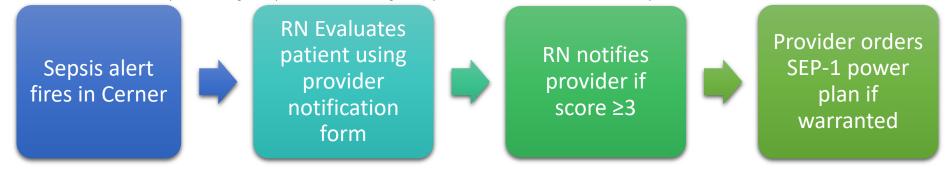

Root Cause of SEP-1 Bundle Not Fully Implemented	Data	Potential QI Strategy
<ul> <li>Fluids (none ordered or not enough)</li> <li>Pt should not get more fluids</li> <li>BP is normal, LA&gt;2, still needs fluids</li> <li>Not using order set - Staggering fluid resuscitation, see how pt responds and d/c fluids before needed amount is infused (pt doesn't need more and literature support is low grade)</li> </ul>	96% SEP-1 abstracted patients meet fluid requirements (July – Oct 2021)	Brainstorm with team
<ul> <li>Providers don't order repeat LA because the first result was not that high and perhaps expected due to pt's comorbid conditions</li> <li>Provider orders "routine" so lab is not completed timely; there is no need to use the SEP-1 power plans since all the elements were completed in ED</li> <li>Do not know the patient is septic         <ul> <li>Patient not presenting in typical fashion, looking for other sources of infection</li> <li>No sepsis alert for providers</li> <li>RNs not executing provider notification process consistently</li> <li>RRT not called for abnormal VS/labs (RRT initiates bundle as indicated)</li> <li>No one is closely identifying sepsis (no sepsis coordinator patient oversight)</li> </ul> </li> </ul>	94% SEP-1 abstracted patients meet BC bundle requirements (July – Oct 2021) 89% SEP-1 abstracted patients meet repeat LA bundle requirements (July – Oct 2021)	<ul> <li>Reflux order for any LA</li> <li>Provider orders repeat LA "timed" or "STAT" (provider awareness)</li> <li>Optimize alert and turn on for providers (see previous section)</li> <li>Improve the RN provider notification process</li> <li>3rd Sepsis Coordinator</li> </ul>

# Data Analysis

### **Required Sepsis Alert Provider Notification Process**

Process went live June 29, 2021 to ensure RNs and providers are aware that patient is possibly septic and may require intervention for optimal outcomes

### Summary July 2021- October 2021

- 38% of alerts are evaluated, of those 27% have a score ≥3 (n=374)
- For the 374 pts with score ≥3, 77% of the time providers are notified (n=288)
- Of the 288 pt's who's providers are notified, 14% order a SEP power plan
- If 27% of alerts have scores ≥3, the providers would have been notified on 595 of 2205 alerts that were not evaluated (potentially alerts were not legitimate)
- ACTION Evaluate alert notification process with ISS and nursing to optimize and improve

# Data Analysis

**Required Provider Notification Process** 

Sepsis alert fires

RN Evaluates patient using provider notification form

RN notifies provider if score ≥3

Provider orders SEP-1 power plan if warranted

# SEP-1 Bundle Fluid Requirements Changes to CMS Guidelines

- Allows providers to infuse a lesser amount of fluid (< 30 ml/kg)</li>
- Permits crystalloid use
- Must have a diagnosis of at least one: Stage 4 CKD, Stage 5 CKD/ESRD or HF
- Providers must document the total fluid volume to be given in lieu of 30 mL/kg
- Effective as of July 1, 2021

# Sepsis Any Diagnosis Observed/Expected Mortality

- Goal ≤ 1.0 which indicates that at least expected deaths do not exceed actual
- Significant change in how sepsis mortality is measured since o/e mortality includes septic patients with COVID-19 dx starting in 2020, but does risk adjust for COVID
- Sepsis o/e mortality is not a direct comparison pre and post pandemic
- Despite COVID-19 patient inclusion, o/e mortality remains at ≤ 1.0

# Sepsis QFT Actions & Next Steps

- 3 Improvement strategies in process:
  - 1. Developing Emergency medicine GME Sepsis simulation training, with goal of multidisciplinary involvement
  - 2. Optimizing sepsis alert to reduce alert fatigue (ie. suppressing alerts for circumstances where patient is already known to be septic)
  - 3. Evaluate and improve the RN provider notification process for sepsis alerts

### Next Steps:

- Review root causes identified with complete stakeholder group for input and additions
- Review suggested improvement strategies with complete stakeholder group, and solicit input to expand list
- Prioritize and execute improvement strategies

### **Unit/Department Specific Data Collection Summarization**

Professional Staff Quality Committee/Quality Improvement Committee

<u>Unit/Department</u>: CAUTI QFT <u>ProStaff/QIC Report Date:</u> 1/20/2022

### Measure Objective/Goal:

- Goal for FY22 ≤ 0.676 (CMS 50th percentile); **Current SIR = 1.319**
- Pre KAIZEN baseline SIR is 1.557
- SIR is as of November 2021; Actual CAUTI FY22 is 14

CAUTIs result in poor outcomes for patients, a negative public perception of care through publically reported safety scores and financially impact the organization through HAC and VBP programs as well as increased treatment costs and LOS.

**Date range of data evaluated:** FYTD SIR (7/2021 – 11/2021)

<u>Analysis of all measures/data: (Include key findings, improvements, opportunities)</u> (If this is not a new measure please include data from your previous reports through your current report):

*volume reduced due to reduced Gemba on weekends **FYTD includes cases removed in Mar 2021	Equal or Bett Targe				n 10% of T hin 5% of	-	Does r	not meet	Target											

FY 22 Total Catheter Days rounded on = 3005	98% of patients with daily bath and peri-care per shift
96% with order and valid rationale	135 catheters removed as a result of the Gemba

### Opportunities:

- Accurate, timely and clinically indicated cultures; reduce pan-culturing practices
- Appropriate indications for IUC, reduction in IUC use; using alternatives to IUC
- Learning from Fallouts

### **Unit/Department Specific Data Collection Summarization**

Professional Staff Quality Committee/Quality Improvement Committee

### If improvement opportunities identified, provide action plan and expected resolution date:

CA	UTI QI Strategy	Status
1.	Adding sticker to IUC	12/27/21
	GOAL: Visual reminder to replace IUC prior to specimen collection after 72 hours to reduce	
	false positives from biofilm.	
2.	Letter for providers on events (like CLABSI)	12/27/21
	GOAL: Provider awareness of HAI.	
3.	Primofit & Medline External Male Catheter Product Trial	3/1/22
	GOAL: Reliable method for male external alternative to IUC	
4.	SonoSite Bladder Scanner conversion	2/1/2022
5.	On-going attempts to do in person Resident education	On-going
6.	Fever Indication for Culture Task Force	On-going
7.	ICU Forum	1/24/22
8.	Add number of attempts for IUC insertion, Policy no more than 2 attempts.	3/1/22
9.	CHG on IUC tubing * pilot ICU	1/24/22
10.	Include timing of CAUTI at HAI committee, differentiate within 5 days or after to identify if	1/13/22
	likely due to insertion	
11.	Accuryn System review active drain clearance system trial	2/1/22
12.	CAUTI Case Reviews Lessons Learned	Monthly at QFT
	GOAL – Reduce CAUTI by ensuring identified opportunities are addressed globally	
13.	Mandatory CBL Resident education On-going monitoring	On-going
	Rapid Cycle Post Gemba Rounds	11/23/21
	GOAL – reduce IUC utilization, verify completion of follow up	
15.	Culture of Culturing committee for urine specimens	11/23/21
	GOAL: Variation in culturing practices is the largest contributing factor to CAUTI.	
16.	Resident Notifications of near misses and events	11/23/21
	GOAL: Resident request for awareness and learning opportunities.	
17.	Mandatory CBL Resident education On-going monitoring	On-going
	Powerchart changes- IUC dynamic group for POA include on arrival to unit from OR/ED,	7/1/21
	other	
	GOAL- capture device list for lines already in place	
19.	Develop orders for Adult Urinary Retention management	9/2020
	GOAL- orders for retention management currently exist as one off options, bundling them	
	together for ease of ordering increases use	
20.	Develop Urine Culture only powerplan to replace single orderable.	2/23/21
	GOAL- Reduce CAUTI events related to culture ordering by guiding intentional use of this	
	risky order	
21.	Bathing Prioritization (in collaboration with CLABSI Committee)	10/2020
	GOAL – Improve bathing/peri-care of IUC patients	
22.	Add 'restricted use' to the urine culture only orderable	7/2020
	GOAL- reduce use of culture only order in defined populations without accompanying UA	
23.	Develop insert IUC <u>Powerplan</u> to include important maintenance elements: straight <u>cath</u>	8/2020
	option prior to IUC insertion, change IUC prior to specimen collection, change IUC at 30	
	days	
	GOAL- Create and bundle essential orders for IUC maintenance	
24.	Develop provider update/education related to current CAUTI status and how to order	9/2020
	IUC/Culturing awareness	
	GOAL- create awareness	
25.	Changes to discontinue IUC orderable- alerts RN to dc the insert IUC Powerplan and	8/2020
	related maintain order	

Please submit your data along with the summary to your PI liaison 2 weeks prior to the scheduled report date.

### **Unit/Department Specific Data Collection Summarization**

Professional Staff Quality Committee/Quality Improvement Committee

	GOAL- assist with order clean up	
26.	Safety Summit (CAUTI education for new hires) relaunch post-COVID GOAL – Improve/sustain RN bundle compliance	3/22/21
27.	Place all IUC order resources on eCoach GOAL- Increase IUC appropriateness/ prompt removal, bundle compliance (improving ease of access for providers and nursing staff)	1/1/2021
28.	Develop Urine Culture only Powerplan to replace single orderable.  GOAL- Reduce CAUTI events related to culture ordering by guiding intentional use of this risky order	12/29/20
29.	Hide single Insert IUC orderable for downtown campus and Rehab GOAL: Improve bundle compliance by driving use of the insert IUC Powerplan which contains needed maintenance elements	10/2020
30.	Kaizen strategy: evaluate option for time clock for line info GOAL- Improve prompt removal, visual reminder of how long the line has been in place	11/2020
31.	Add 3-way catheter as trigger to device list GOAL- accurate collection of device count	4/22/21
32.	Changes to the discontinue order- alert will prompt the provider to order retention management order. Single orderable done, <u>Powerplan</u> additions in progress. GOAL- provides orders for nursing to manage post IUC DC retention	10/1/21
33.	Thoughtful pause= primary RN confers with charge nurse prior to specimen collection for algorithm use GOAL: Reduce unnecessary urine cultures	3/22/21
34.	Medline urology assessment of current practices and care of IUCs GOAL: Evaluate CAUTI reduction program for improvement opportunities.	5/25/21

^{*}QI strategies colored green indicate completed; yellow indicates in process strategies Next Steps/Recommendations/Outcomes:

- A. Continue to maintain Kaizen initiatives: Daily IUC Gemba rounds, data collection, and dissemination and QI strategy development.
- B. Continue to monitor CAUTI events, reviewed with unit leadership at the HAI review meeting, unit leadership creates quality improvement plan and implements at the unit level. The QFT monitors QI opportunities for global implementation
- C. Standard Urology Product Line Conversion go live February 2022 with education and maintained support by Medline.
- D. Address culturing practices in newly revised Fever as an Indication for Culture Taskforce with medical staff partnership
- E. ICU HAI Forum on 1/24/2022 to inspire and synthesize sustainable prevention practices for CAUTI and CLABSI.

# Kaizen Root Cause

### Analysis:

### Identified Root Causes

(in order from most significant to least):

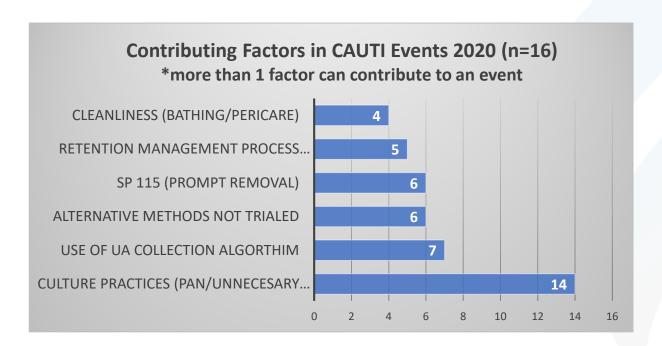

- Communication
- 2. Leadership Standard Work
- Peri-care/Bathing
- 4. Prompt Catheter Removal
- Culture Ordering
- 6. Retention Management
- 7. Staff Consistency with prevention bundle
- 8. Alternatives to Catheter Insertion

Kaizen
improvement
strategies
focused on
addressing
the top 4 root
causes

Initial KAIZEN initiatives focused on the top **4** root causes

Since April 2020 we have incorporated strategies to address **7** of the root causes, including:
Culture ordering
Retention Management
Alternatives to Catheter Insertion

# BACKGROUND

- Multidisciplinary team reviews CAUTI events and counts contributing factors to events based on CDC evidenced-based guidelines
- Top 3 contributing factors to CAUTI events culturing practices, use of UA algorithm and alternative methods not tried

### 2020 Key Strategies

- Daily line rounds to ensure best practices are consistent (bathing, peri-care), and line necessity.
- Specimen collection practices and necessity
- Culturing addressing pan culturing practices
- Culturing optimization of orders for line placement, maintenance of line and retention management

# Post KAIZEN-Gemba Data

### **FY22**

Total Catheter days rounded on = 3005 98% of patients with daily bath and peri-care each shift 96% have order and valid rationale 135 catheters removed as a result of the Gemba

34. Medline urology assessment of current practices and care of IUCs	5/25/21

# **Current State**

- Multidisciplinary team reviews CAUTI events and counts contributing factors to events based on CDC evidenced-based guidelines
- All current initiatives continue, on 9/24/21 a modified Kaizen narrowed work on root causes for this FY

### **2021 Key Contributors**

- IUC tray supply availability affects sterile insertion;
   prevents changing IUC prior to specimen collection
- FY 22: 54% CAUTI events a second culture was ordered within 24 hours of urine culture = pan culturing
- Single episode of fever or leukocytosis precipitated the urine culture in 38.2% of events (2021 thru Oct)
- Surge documentation in effect during this time frame skews the data; unknown if bathing performed and not documented or not done

Quality Improvement Plan						

Printed copies are for reference only. Please refer to the electronic copy for the latest version.

#### I. Purpose

The purpose of Kaweah Delta Health Care District's (KDHCD) Quality Improvement Plan is to have an effective, data-driven Quality Assessment Performance Improvement program that delivers high-quality, excellent clinical services and enhances patient safety.

### II. Scope

All KDHCD facilities, departments, patient care delivery units and/or service areas fall within the scope of the quality improvement plan requirements.

### III. Structure and Accountability

#### **Board of Directors**

The Board of Directors retain overall responsibility for the quality of patient care. The Board approves the annual Quality Improvement Plan and assures that appropriate allocation of resources is available to carry out that plan.

The Board receives reports from the Medical Staff and Quality Council. The Board shall act as appropriate on the recommendations of these bodies and assure that efforts undertaken are effective and appropriately prioritized.

### **Quality Council**

The Quality Council is responsible for establishing and maintaining the organization's Quality Improvement Plan and is chaired by a Board member. The Quality Council shall consist of the Chief Executive Officer, representatives of the Medical Staff and other key hospital leaders. It shall hold primary responsibility for the functioning of the Quality Assessment and Performance Improvement program. Because District quality improvement activities may involve both the Medical Staff and other representatives of the District, membership is multidisciplinary. The Quality Council requires the Medical Staff and the organization's staff to implement and report on the activities for identifying and evaluating opportunities to improve patient care and services throughout the organization. The effectiveness of the quality

improvement and patient safety activities will be evaluated and reported to the Quality Council.

#### **Medical Staff**

The Medical Staff, in accordance with currently approved medical staff bylaws, shall be accountable for the quality of patient care. The Board delegates authority and responsibility for the monitoring, evaluation and improvement of medical care to the Professional Staff Quality Committee "Prostaff", chaired by the Vice Chief of Staff. The Chief of Staff delegates accountability for monitoring individual performance to the Clinical Department Chiefs. Prostaff shall receive reports from and assure the appropriate functioning of the Medical Staff committees. "Prostaff" provides oversight for medical staff quality functions including peer review.

### Quality Improvement Committee (QIC)

QIC has responsibility for oversight of organizational performance improvement. Membership includes key organizational leaders including the Medical Director of Quality and Patient Safety or Chief Quality Officer, Chief Operating Officer, Chief Nursing Officer, Assistant Chief Nursing Officer, Directors of Quality and Patient Safety, Nursing Practice, and Risk Management; Manager of Quality and Patient Safety and Manager of Infection Prevention. This committee reports to Prostaff and the Quality Council.

The QIC shall have primary responsibility for the following functions:

 Health Outcomes: The QIC shall assure that there is measureable improvement in indicators with a demonstrated link to improved health outcomes. Such indicators include but are not limited to measures reported to the Centers for Medicare and Medicaid Services (CMS) and The Joint Commission (TJC), and other quality indicators, as appropriate.

### 2. Quality Indicators:

- a. The QIC shall oversee measurement, and shall analyze and track quality indicators and other aspects of performance. These indicators shall measure the effectiveness and safety of services and quality of care.
- b. The QIC shall approve the specific indicators used for these purposes along with the frequency and detail of data collection.
- c. The Board shall ratify the indicators and the frequency and detail of data collection used by the program.
- 3. **Prioritization:** The QIC shall prioritize quality improvement activities to assure that they are focused on high- risk, high- volume, or problem-prone areas. It shall focus on issues of known frequency, prevalence or severity and shall give precedence to issues that affect health

outcomes, quality of care and patient safety. The QIC is responsible to establish organizational Quality Focus Teams who:

- Are focused on enterprise-wide high priority, high risk, problem prone QI issues
- May require elevation, escalation and focus from senior leadership
- c. Have an executive team sponsor
- d. Are chaired by a Director or Vice President
- e. May have higher frequency of meetings as necessary to focus work and create sense of urgency.
- f. Report quarterly into the QAPI program
- 4. **Improvement:** The QIC shall use the analysis of the data to identify opportunities for improvement and changes that will lead to improvement. The QIC will also oversee implementation of actions aimed at improving performance.
- 5. **Follow- Up:** The QIC shall assure that steps are taken to improve performance and enhance safety are appropriately implemented, measured and tracked to determine that the steps have achieved and sustained the intended effect.
- 6. **Performance Improvement Projects:** The QIC shall oversee quality improvement projects, the number and scope of which shall be proportional to the scope and complexity of the hospital's services and operations. The QIC must also ensure there is documentation of what quality improvement projects are being conducted, the reasons for conducting those projects, and the measureable progress achieved on the projects.

#### **Medical Executive Committee**

The Medical Executive Committee (MEC) receives, analyzes and acts on performance improvement and patient safety findings from committees and is accountable to the Board of Directors for the overall quality of care.

#### **Nursing Practice Improvement Council**

The Nursing Practice Improvement Council is designed to ensure quality assessment and continuous quality improvement and to oversee the quality of patient care (with focus on systems improvements related to nursing practices and care outcomes).

The Nursing Practice Improvement Council is chaired by the Director of Nursing Practice and facilitated by a member of the Quality and Patient Safety department. This Council has staff nurse representation from a broad scope of inpatient and out-patient nursing units, and procedural nursing units. The Council will report to Patient Care Leadership, Professional Practice Council (PPC) and the Professional Staff Quality Committee.

#### **Graduate Medical Education**

Graduate Medical Education (Designated Institutional Official (DIO), faculty and residents, are involved in achieving quality and patient safety goals and improving patient care through several venues including but not limited to:

- a) Collaboration between Quality and Patient Safety Department, Risk Management, and GME Quality Subcommittee
- b) GME participation in Quality Improvement Committee and Patient Safety Committee
- c) GME participation in KDHCD quality committees and root cause analysis (including organizational dissemination of lessons learned)

### Methodologies:

Quality improvement (QI) models present a systematic, formal framework for establishing QI processes within an organization. QI models used include the following:

- Model for Improvement (FOCUS Plan-Do-Study-Act [PDSA] cycles)
- <u>Six Sigma</u>: Six Sigma is a method of improvement that strives to decrease variation and defects with the use of the DMAIC roadmap.
- <u>Lean</u>: is an approach that drives out waste and improves efficiency in work processes so that all work adds value with the use of the DMAIC roadmap.
- 1. The **FOCUS-Plan, Do, Check, Act (PDCA)** methodology is utilized to plan, design, measure, assess and improve functions and processes related to patient care and safety throughout the organization.
  - F—Find a process to improve
  - **O—Organize** effort to work on improvement
  - C—Clarify knowledge of current process
  - U---Understand process variation
  - S—Select improvement

#### · Plan:

- Objective and statistically valid performance measures are identified for monitoring and assessing processes and outcomes of care including those affecting a large percentage of patients, and/or place patients at serious risk if not performed well, or performed when not indicated, or not performed when indicated; and/or have been or likely to be problem prone.
- Performance measures are based on current knowledge and clinical experience and are structured to represent cross-departmental, interdisciplinary processes, as appropriate.

#### Do:

- Data is collected to determine:
  - Whether design specifications for new processes were met
  - The level of performance and stability of existing processes
  - Priorities for possible improvement of existing processes

#### Check:

 Assess care when benchmarks or thresholds are reached in order to identify opportunities to improve performance or resolve problem areas

#### Act:

- Take actions to correct identified problem areas or improve performance
- Evaluate the effectiveness of the actions taken and document the improvement in care
- Communicate the results of the monitoring, assessment and evaluation process to relevant individuals, departments or services
- 3. DMAIC (Lean Six Sigma): DMAIC is an acronym that stands for Define, Measure, Analyze, Improve, and Control. It represents the five phases that make up the road map for Lean Six Sigma QI initiatives.
  - Define the problem, improvement activity, opportunity for improvement, the project goals, and customer (internal and external) requirements. QI tools that may be used in this step include:
    - Project charter to define the focus, scope, direction, and motivation for the improvement team
    - Process mapping to provide an overview of an entire process, starting and finishing at the customer, and analyzing what is required to meet customer needs
  - Measure process performance.
    - Run/trend charts, histograms, control charts
    - Pareto chart to analyze the frequency of problems or causes
  - Analyze the process to determine root causes of variation and poor performance (defects).
    - o Root cause analysis (RCA) to uncover causes
    - Failure mode and effects analysis (FMEA) for identifying possible product, service, and process failures

- Improve process performance by addressing and eliminating the root causes.
  - Pilot improvements and small tests of change to solve problems from complex processes or systems where there are many factors influencing the outcome
  - Kaizen event to introduce rapid change by focusing on a narrow project and using the ideas and motivation of the people who do the work
- Control the improved process and future process performance.
  - Quality control plan to document what is needed to keep an improved process at its current level. Statistical process control (SPC) for monitoring process behavior
  - Mistake proofing (poka-yoke) to make errors impossible or immediately detectable

#### IV. Confidentiality

All quality assurance and performance improvement activities and data are protected under the Health Care Quality Improvement Act of 1986, as stated in the Bylaws, Rules and Regulations of the Medical Staff, and protected from discovery pursuant to California Evidence Code §1157.

#### V. Annual Evaluation

Organization and Medical Staff leaders shall review the effectiveness of the Quality Improvement Plan at least annually to insure that the collective effort is comprehensive and improving patient care and patient safety. An annual evaluation is completed to identify components of the plan that require development, revision or deletion. Organization and Medical Staff leaders also evaluate annually their contributions to the Quality Improvement Program and to the efforts in improving patient safety.

#### VI. Attachments

Components of the Quality Improvement and Patient Safety Plan:

Attachment 1: Quality Improvement Committee Structure
Attachment 2: KDHCD- Prostaff Reporting Documents
Attachment 3: Quality and Patient Safety Priorities, Outstanding
Health Outcomes Strategic Plan

[&]quot;These guidelines, procedures, or policies herein do not represent the only medically or legally acceptable approach, but rather are presented with the recognition that acceptable approaches exist. Deviations under appropriate circumstances do not represent a breach of a medical standard of care. New knowledge, new techniques, clinical or research data, clinical experience, or clinical or bio-ethical circumstances may provide sound reasons for alternative approaches, even though they are not described in the document."

Patient Safety Plan	

#### Printed copies are for reference only. Please refer to the electronic copy for the latest version.

#### I. Purpose

- Encourage organizational learning about medical/health care risk events and near misses
- Encourage recognition and reporting of medical/health events and risks to patient safety using just culture concepts
- Collect and analyze data, evaluate care processes for opportunities to reduce risk and initiate actions
- Report internally what has been found and the actions taken with a focus on processes and systems to reduce risk
- Support sharing of knowledge to effect behavioral changes in itself and within Kaweah Delta Healthcare District (KDHCD)

#### II. Scope

All KDHCD facilities, departments, patient care delivery units and/or service areas fall within the scope of the quality improvement and patient safety plan requirements.

#### III. Structure and Accountability

#### A. Board of Directors

The Board of Directors retains overall responsibility for the quality of patient care and patient safety. The Board approves annually the Patient Safety Plan and assures that appropriate allocation of resources is available to carry out that plan.

The Board receives reports from the Patient Safety Committee through the Professional Staff Quality Committee. The Board shall act as appropriate on the recommendations of these bodies and assure that efforts undertaken are effective and appropriately prioritized.

#### B. Quality Council

The Quality Council is responsible for establishing and maintaining the organization's Patient Safety Plan and is chaired by a Board member. The Quality Council shall consist of the Chief Executive Officer, representatives of the Medical Staff and other key hospital leaders. It shall hold primary responsibility for the functioning of the Quality Assessment and Performance Improvement program. Because District performance improvement activities may involve both the Medical Staff and other representatives of the District, membership is multidisciplinary. The Quality Council requires the Medical Staff and the organization's staff to implement and report on the activities for identifying and evaluating opportunities to improve patient care and services throughout the organization. The effectiveness of the quality improvement and patient safety activities will be evaluated and reported to the Quality Council.

#### C. Patient Safety Committee

The Patient Safety Team is a standing interdisciplinary group that manages the organization's Patient Safety Program through a systematic, coordinated, continuous approach. The Team will meet monthly to assure the maintenance and improvement of Patient Safety in establishment of plans, processes and mechanisms involved in the provision of the patient care.

The scope of the Patient Safety Team includes medical/healthcare risk events involving the patient population of all ages, visitors, hospital/medical staff, students and volunteers. Aggregate data* from internal (IS data collection, incident reports, questionnaires,) and external resources (Sentinel Event Alerts, evidence based medicine, etc.) will be used for review and analysis in prioritization of improvement efforts, implementation of action steps and follow-up monitoring for effectiveness. The Patient Safety Committee has oversight of KDHCD activities related to the National Quality Forum's (NQF) Safe Practices (SP) Medication Safety, Section #4 Maternity Care, #5 ICU physician staffing, #6 A-D Culture of Safety Leadership Structures & System Documentation, Culture Measurement, Feedback & Intervention Documentation, Nursing workforce and Hand Hygiene, #7 Managing Serious Errors, and #8 Bard Code Medication Administration.

- 1. The Patient Safety Officer is the Chief Quality Officer
- 2. The Patient Safety Committee is chaired by the Patient Safety Officer or designee.
- 3. The responsibilities of the Patient Safety Officer include institutional compliance with patient safety standards and initiatives, reinforcement of the expectations of the Patient Safety Plan, and acceptance of accountability for measurably improving safety and reducing errors. These duties may include listening to employee and patient concerns, interviews with staff to determine what is being done to safeguard against occurrences, and immediate response to reports concerning workplace conditions.
- 4. Team membership includes services involved in providing patient care, such as: Pharmacy, Laboratory, Surgical Services, Risk Management, Infection Prevention, Medical Imaging, and Nursing. The medical staff representative on the team will be the Vice Chief of Staff.

#### D. Medication Safety Quality Focus Team

The Medication Safety Quality Focus Team (MSQFT) is an interdisciplinary group that manages the organizations Medication Safety Program including the District Medication Error Reduction Plan (MERP).

The purpose of the MSQFT is to direct system actions regarding reductions in errors attributable to medications promoting effective and safe use of medication throughout the organization. Decisions are made utilizing data review, approval of activities, resource allocation, and monitoring activities. Activities include processes that are high risk, high volume, or problem prone, some of which may be formally approved by the MSQFT as a District MERP goal (see Policy AP154 Medication Error Reduction Plan).

The MSQFT provides a monthly report to the Pharmacy and Therapeutics Committee and quarterly reports to the Professional Staff Quality Committee and directly to Quality Council. The MSQFT Chair is a member of the Patient Safety Committee. A quarterly report is presented at Patient Safety Committee in addition to active participation in patient safety activities related to medication use.

#### IV. Organization and Function

- A. The mechanism to insure all components of the organization are integrated into the program is through a collaborative effort of multiple disciplines. This is accomplished by:
  - Reporting of potential or actual occurrences through the Occurrence Reporting Process Policy (AP10) by any employee or member of the medical staff. Examples of potential or actual occurrences include pressure ulcers, falls, adverse drug events, and misconnecting of: intravenous lines, enteral feeding tubes and epidural lines.
  - 2. Reporting of potential or actual concerns in a daily leadership safety huddle which involves issues which occurred within the last 24 hours, a review the steps taken to resolve those matters when applicable, and anticipate challenges or safety issues in the next 24 hours. The daily safety huddle occurs Monday to Friday with the exception of holidays and includes directors and vice presidents that represent areas throughout the organization. The purpose of the daily safety huddle is immediate organizational awareness and action when warranted. Examples of issues brought forth in the Daily Safety Huddle include, patients at risk for elopement, violence, or suicide, and also can include potential diversion events, patient fall events, and medication related events.

3. Communication between the Patient Safety Officer and the Chief Operating Officer to assure a comprehensive knowledge of not only clinical, but also environmental factors involved in providing an overall safe environment.

- 4. Reporting of patient safety and operational safety measurements/activity to the performance improvement oversight committees, Professional Services Quality Committee "Prostaff" and Quality Improvement Committee (QIC). Prostaff is a multidisciplinary medical staff committee composed of various key organizational leaders including: Medical Executive Committee members, Chief Executive Officer, Chief Operating Officer, Chief Medical Officer/Chief Quality Officer, Chief Nursing Officer, Member of the Board of Directors, and Directors of Nursing, Performance Improvement, Risk Management, and Pharmacy. QIC is a multidisciplinary committee comprised of various key organizational leaders including the CEO, CNO, CIO, CFO, VP of Human Resources, VP Surgical Services, VP of Post Acute Care and Ancillary Services, Directors of Quality & Patient Safety, Risk Management, and Nursing Practice and the manager of Infection Prevention.
- Graduate Medical Education
  - Graduate Medical Education (Designated Institutional Official (DIO), faculty and residents, are involved in achieving quality and patient safety goals and improving patient care through several venues including but not limited to:
    - Collaboration between Quality and Patient Safety Department, Risk Management, and GME Quality Subcommittee
    - 2. GME participation in Quality Improvement Committee and Patient Safety Committee
    - 3. GME participation in KDHCD quality committees and root cause analysis (including organizational dissemination of lessons learned)
- B. The mechanism for identification and reporting a Sentinel Event/other medical error will be as indicated in Organizational Policies AP87. Any root cause analysis of hospital processes conducted on either Sentinel Events or near misses will be submitted for review/recommendations to the Patient Safety Committee, Professional Staff Quality Committee and Quality Council.
- C. As this organization supports the concept that events most often occur due to a breakdown in systems and processes, staff involved in an event with an adverse outcome will be supported by:
  - 1. A non-punitive approach without fear of reprisal (just culture concepts).
  - 2. Voluntary participation into the root cause analysis for educational purposes and prevention of further occurrences.
  - 3. Resources such as Pastoral Care, Social Services, or EAP should the need exist to counsel the staff
  - 4. Safety culture staff survey (i.e. the Safety Attitudes Questionnaire) administered at least every 2 years to targeted staff and providers.
- D. As a member of an integrated healthcare system and in cooperation with system initiatives, the focus of Patient Safety activities include processes that are high risk, high volume or problem prone, and may include:
  - 1. Adverse Drug Events
  - 2. Nosocomial Infections
  - 3. Decubitus Ulcers
  - 4. Blood Reactions
  - 5. Slips and Falls
  - 6. Restraint Use
  - 7. Serious Event Reports
  - 8. DVT/PE

E. A proactive component of the program includes the selection at least every 18 months of a high risk or error prone process for proactive risk assessment such as a Failure Modes Effects Analysis (FMEA), ongoing measurement and periodic analysis. The selected process and approach to be taken will be approved by the Patient Safety Committee and Quality Council.

The selection may be based on information published by The Joint Commission (TJC) Sentinel Event Alerts, and/or other sources of information including risk management, performance improvement, quality assurance, infection prevention, research, patient/family suggestions/expectations or process outcomes.

- F. Methods to assure ongoing inservices, education and training programs for maintenance and improvement of staff competence and support to an interdisciplinary approach to patient care is accomplished by:
  - 1. Providing information and reporting mechanisms to new staff in the orientation training.
  - 2. Providing ongoing education in organizational communications such as newsletters and educational bundles.
  - 3. Obtaining a confidential assessment of staff's willingness to report medical errors at least once every two years.
- G. Internal reporting To provide a comprehensive view of both the clinical and operational safety activity of the organization:
  - 1. The minutes/reports of the Patient Safety Committee, as well as minutes/reports from the Environment of Care Committee will be submitted through the Director of Performance Improvement and Patient Safety to the Professional Staff Quality Committee.
  - 2. These monthly reports will include ongoing activities including data collection, analysis, and actions taken and monitoring for the effectiveness of actions.
  - 3. Following review by Professional Staff Quality Committee, the reports will be forwarded to Quality Council.
- H. The Patient Safety Officer or designee will submit an Annual Report to the KDHCD Board of Directors and will include:
  - Definition of the scope of occurrences including sentinel events, near misses and serious occurrences
  - 2. Detail of activities that demonstrate the patient safety program has a proactive component by identifying the high-risk process selected
  - 3. Results of the high-risk or error-prone processes selected for proactive risk assessment.
  - 4. The results of the program that assesses and improves staff willingness to report medical/health care risk events
  - 5. A description of the examples of ongoing in-service, and other education and training programs that are maintaining and improving staff competence and supporting an interdisciplinary approach to patient care.

#### V. Evaluation and Approval

The Patient Safety Plan will be evaluated at least annually or as significant changes occur, and revised as necessary at the direction of the Patient Safety Committee, Professional Staff Quality Committee, and/or Quality Council. Annual evaluation of the plan's effectiveness will be documented in a report to the Quality Council and the KDHCD Board of Directors.

#### VI. Confidentiality

All quality assurance and performance improvement activities and data are protected under the Health Care Quality Improvement Act of 1986, as stated in the Bylaws, Rules and Regulations of the Medical Staff, and protected from discovery pursuant to California Evidence Code §1157.

Attachments - Attachment 1: Quality Improvement/Patient Safety Committee Structure

"These guidelines, procedures, or policies herein do not represent the only medically or legally acceptable approach, but rather are presented with the recognition that acceptable approaches exist. Deviations under appropriate circumstances do not represent a breach of a medical standard of care. New knowledge, new techniques, clinical or research data, clinical experience, or clinical or bio-ethical circumstances may provide sound reasons for alternative approaches, even though they are not described in the document."

# Acronyms

CARF - Commission on Accreditation of Rehabilitation Facilities

CAUTI - Catheter Associated Urinary Tract Infection

CLABSI - Central Line Associated Blood Stream Infection

HAPI – Hospital Acquired Pressure Injury

LOC – Level of consciousness

NDNQI - The National Database of Nursing Quality Indicators

NHSN - National Healthcare Safety Network

SNF – skilled nursing facility

SBO - Small bowel obstruction

SOB – Shortness of breath

# Rehabilitation Hospital Established May 1994

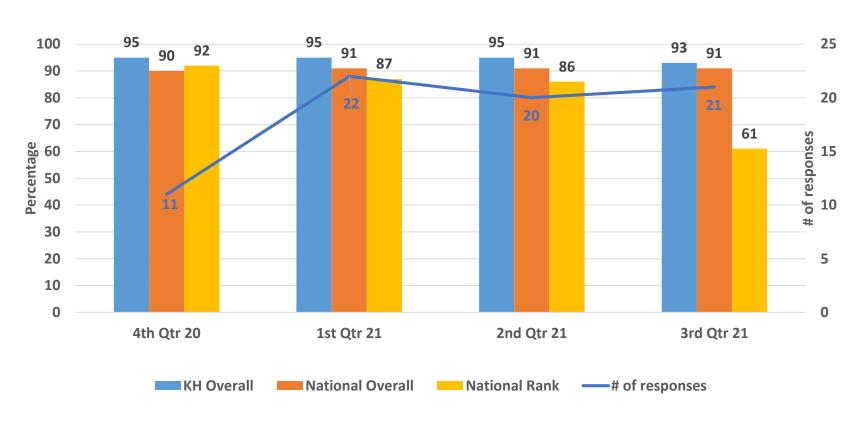

- CARF Accreditation
- 45 bed
- Budgeted census 18
- Physical, Occupational and Speech Therapy
- 3 hours per day
- Specific criteria for admission
  - Diagnosis and medical necessity
  - Discharge plan

### Patient Satisfaction

#### **Overall Assessment**

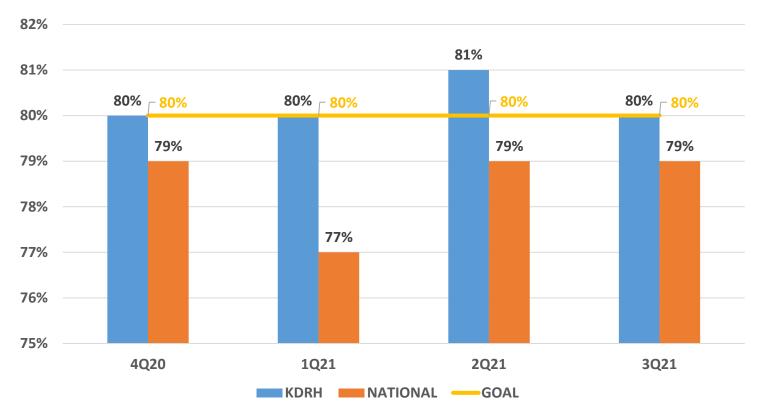

- Press Ganey
- 40 questions
- Patient Satisfaction Committee
  - Staff driven
  - Develop action plans

# Discharge to Community

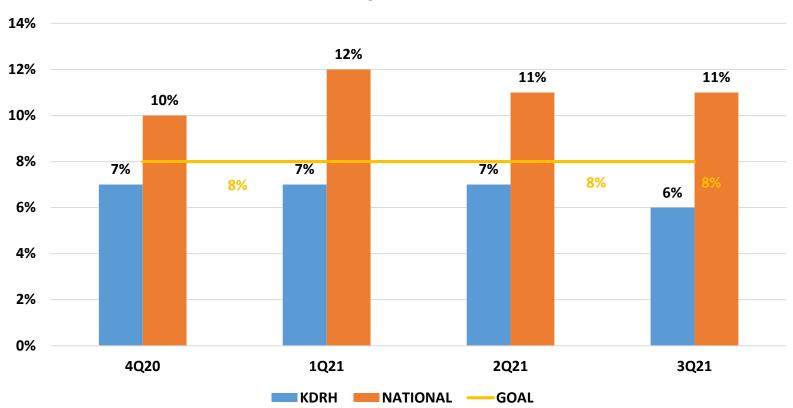

**OVERALL** 

- Patients returning home
  - independently
  - with family
- Higher is better
- Meeting Goal
- Better than the Nation

# Discharge to Long Term

#### **OVERALL**

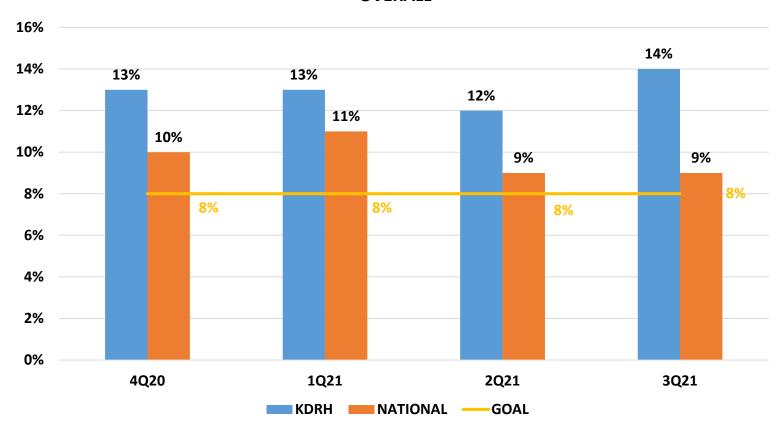

- SNF instead of home
- Lower is better
- Meeting Goal
- Better than the Nation

# Discharge to Acute

#### **OVERALL**

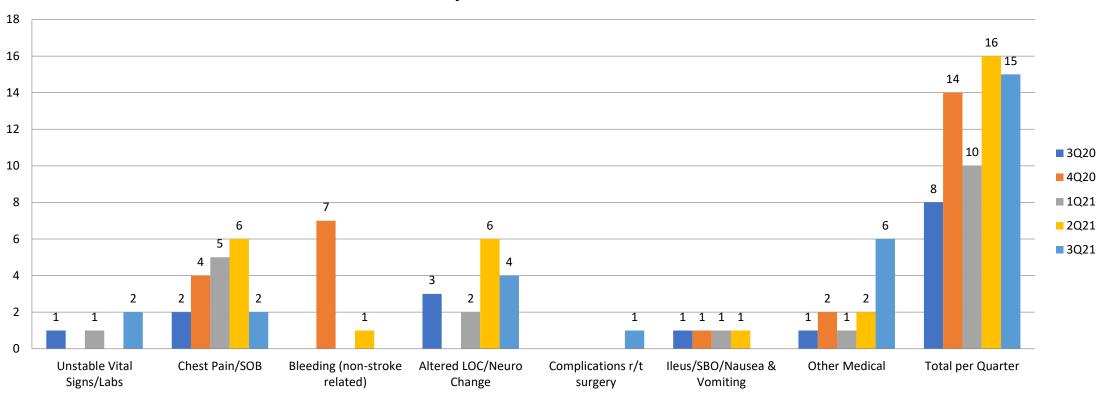

- Lower is better
- Not meeting Goal
- Worse than the Nation
  - Decreased onset days
  - Increased complexity
  - Medical Center census

# Reasons for Transfer

#### **Top Reasons for Transfer**

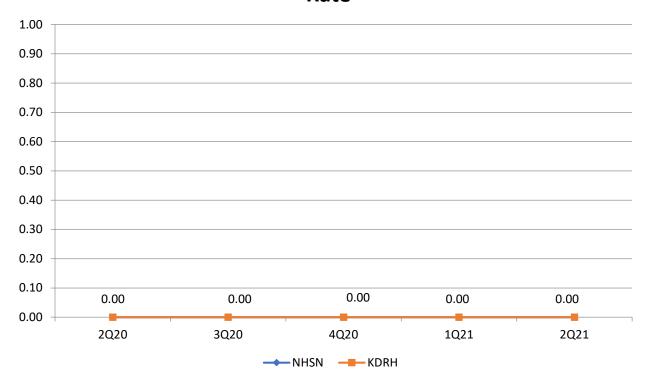

# CLABSI

### Central Line Associated Blood Stream Infection Rate

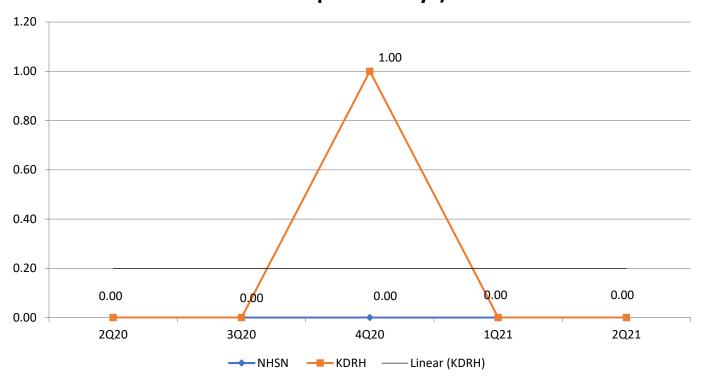

Low # of central lines on Rehab unit

# CAUTI

### Catheter Associated Urinary Tract Infection Rate (per 1000 patient days)

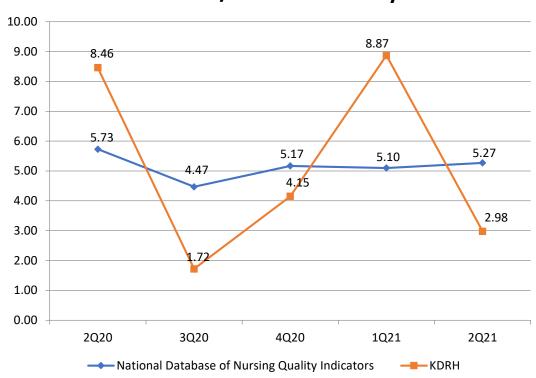

• Each CAUTI is reviewed with Infection Prevention and committee.

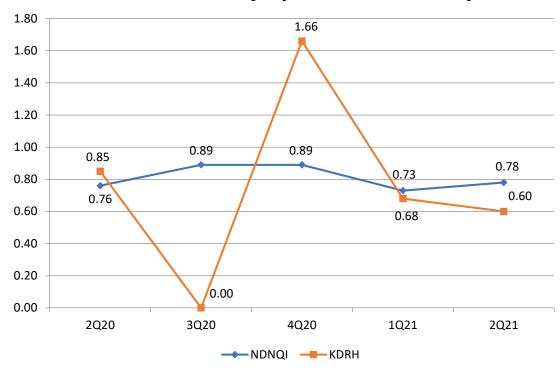

# FALL RATE

#### Fall Rate/1000 Patient Days

#### Fall Rate with Injury/ 1000 Patient Days

^{*} National Standard is Acute Hospital Quality Indicator

# SafeGait

### 1st of its kind in California

- Improved Patient Outcomes and Function
- Safer Patient Handling
- Dynamic Fall Protection and Fall Recovery
- Reduces Length of Hospital Stay
- Patient Specific Data to Show Progress

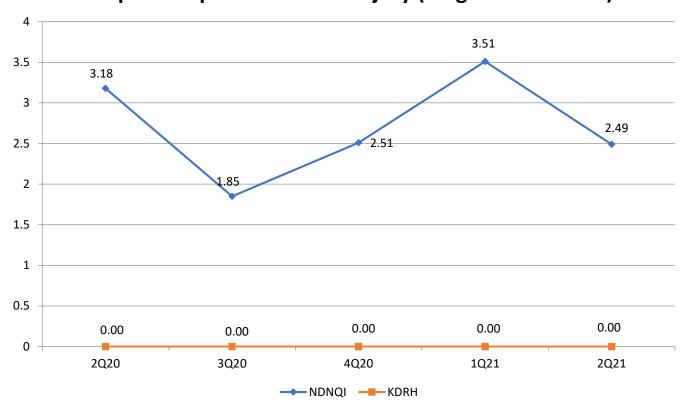

# HAPI

#### **Hospital Acquired Pressure Injury (Stage 2 and above)**

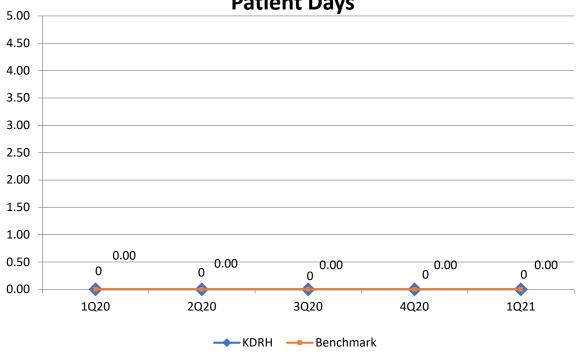

No pressure injuries

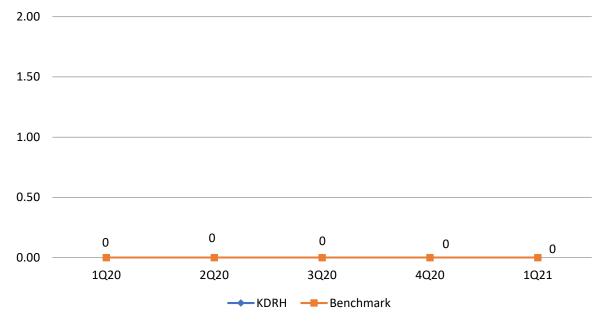

# WOUNDS

### Wounds That Developed on Unit/ 1000 Patient Days

### Wounds That Worsened on Unit/ 1000 Patient Days

# Live with passion.

Health is our passion. Excellence is our focus. Compassion is our promise.
